SUMMARY

Data Analyst / BI Analyst with experience at PwC delivering Power BI dashboards and data-driven insights. Skilled in SQL, Excel, and data analysis, with proven ability to transform multi-source data into actionable insights and support business decision-making across teams.

PROFESSIONAL EXPERIENCE

PwC Vietnam, Ho Chi Minh City

01/2026 – 04/2026

Tax Technology Internship (Data & BI)

- Designed and developed **Power BI dashboards** integrating multiple data sources, enabling stakeholders to monitor adoption rates across **800+ client sites** and identify underperforming areas. Provided **actionable insights** through key metrics supporting targeted interventions and data-driven decision-making.
- Built a secure **TaxLookup** tool in **Power BI**, implementing **RLS** to restrict data access to authorised users. Designed a **validation-based search mechanism** requiring exact tax code input, reducing the risk of accidental data exposure and enhancing compliance with data privacy standards.
- Developed a **Power Apps workflow** with a two-screen interface, integrating **Power BI dashboards** and a request submission system that allows users to select single or multiple engagement sites for deletion. Implemented real-time status updates ("Requested") and captured requester details, synchronised with **SharePoint List** for tracking and transparency.

Chemist Warehouse, Hamilton

12/2024 – 01/2026

Pharmacy Assistant (Retail Operations Support)

- Supported planogram updates by **identifying low-visibility** placement of fast-moving items and assisting repositioning, resulting in improved product accessibility and fewer customer queries.
- Observed customer behaviour during promotions, identified common purchase barriers, and shared insights with the team, leading to improved product communication and **better conversion**.

PROJECTS

Telecom Customer Churn Analytics & Prediction [Link](#)

03/2026

- Analysed 7,000+ customer records to identify key drivers of churn using **Python**
- Built a Random Forest **model to predict churn** and identify 19 high-risk customers.
- Identified key churn drivers and developed customer risk segmentation, supporting proactive retention planning
- Built **Power BI report** highlighting \$1.56K monthly revenue at risk, enabling targeted business interventions.
- Integrated Claude Code with Power BI via MCP to automatically regenerate and optimise DAX measures, improving efficiency and reducing manual effort.

Skills: Power BI, Python (sklearn, pandas, matplotlib), MCP, Claude Code Integration, DAX

ETL Pipeline and Live Power BI

07/2025

- Designed and implemented an **ETL pipeline** to load structured data into a SQL Server data warehouse.
- Connected Power BI to an SSAS cube via live connection, enabling real-time data analysis and reporting
- Developed interactive dashboards with **drill-down capabilities**, improving reporting efficiency and enabling self-service data exploration.

Skills: Power BI · ETL · SQL · Visual Studio · Data Warehousing · SSAS · SSIS

Global Car Hire Database

06/2025

- Conducted **requirements elicitation** through stakeholder communication and workshops to define business needs
- Designed conceptual, logical, and physical data models, creating EER diagrams in Visio
- Developed and executed **T-SQL** scripts to build and populate the database for efficient data storage and retrieval.
- Implemented **4+ stored procedures** and triggers (booking, pickup, cancellation, return) with error handling to ensure data accuracy and process integrity.

Skills: T-SQL · Visio · Microsoft SQL Server · Requirements Elicitation

Pedestrian Patterns on Major Sydney Street Link		05/2025
- Analysed large-scale time-series data (188K+ records) from the City of Sydney Data Hub to uncover peak traffic periods and location-based movement patterns using SQL - Standardized and validated raw datasets to ensure reliability before analysis. - Built KPI-driven dashboards in Power BI to support trend monitoring across time and locations. - Delivered data-driven insights on peak traffic patterns, supporting resource allocation and operational decisions		
Skills: Power BI · SQL · Excel · Data Modelling · DAX · ETL Pipeline		
SKILLS		
Data Platforms & BI (Certified): Power BI, Databricks, Azure, Microsoft Fabric Data Engineering: SQL, ETL/ELT, Data Warehousing, SSIS, SSAS Analytics & Programming: Python (pandas, numpy, sklearn), R, SAS Tools: Excel (Advanced), Power Automate, Power Apps, Git		
CERTIFICATE		
Databricks Fundamentals (2025) Databricks PL-300: Power BI Data Analyst Associate (2025) Microsoft AZ-900: Microsoft Azure Fundamentals (2025) Microsoft DP-700: Fabric Analytics Engineer Associate (2025) Microsoft SQL (Advanced) Certificate (2025) HackerRank Excel Fundamental for Data Analysis (2021) Coursera		
EDUCATION		
University of Newcastle		08/2023 - 08/2025
Master of Information Technology Major: Business Analytics		
Grade: Distinction Relevant Coursework: Data Analytics for Business, Big Data, Business Intelligence for the Enterprise, Object Oriented Programming, System Analysis and Design, Project Planning and Management		
S P Jain School of Global Management		10/2020 - 05/2023
Bachelor of Data Science		
Relevant Coursework: Advanced Analytics, Statistical Data Analysis, Programming for Analytics, Data Integration and Warehousing
